

LETTER OF RECOMMENDATION

To Whomsoever It May Concern,

I am pleased to recommend **Ansh Patel** for admission to your Master's program.

Ansh's association with **Xansr Technologies LLP** has been meaningful. He first joined us as an intern, where he stood out for his curiosity, sincerity, and willingness to take ownership beyond what was expected at his level. After gaining additional professional exposure at another organization, he rejoined Xansr as a developer and became part of our work on the **Temple Run franchise**.

What impressed us was the growth he showed between his internship and his return. As an intern, he showed strong potential; as a developer, he came back with greater technical maturity, sharper problem-solving ability, and a better understanding of production-level expectations. On Temple Run, he contributed to development tasks that required attention to detail, responsiveness to feedback, and the ability to work within established systems.

Ansh has a strong development foundation and a practical approach to learning. He does not complete tasks mechanically; he tries to understand the larger context, asks relevant questions, and looks for ways to improve the outcome. This combination of curiosity and execution discipline made him a reliable member of the team.

He is also a good collaborator. He communicates clearly, responds well to guidance, and works constructively with peers and seniors. In a team environment, especially on established game franchises, this attitude is valuable. He showed patience, accountability, and a genuine interest in improving as a developer.

Beyond technical skills, Ansh brings qualities that matter in a rigorous academic environment: consistency, humility, adaptability, and the desire to keep learning. His progression from intern to professional developer reflects his ability to absorb feedback and grow through real-world experience.

I believe Ansh has the aptitude, discipline, and mindset to do well in a Master's program. I am confident he will make the most of the opportunity and contribute positively to the academic environment around him.

I wholeheartedly recommend **Ansh Patel** for admission and wish him continued success.

Sincerely,

Simon H Banerjee
