LETTER OF RECOMMENDATION

It is my pleasure to write this Letter of Recommendation for **Mr. Ansh Patel**, a student from the Information Technology department. As Head of the Department of Information Technology, and as the faculty member who taught him Computer Organization, I am well placed to comment on his academic discipline, technical aptitude, and potential for advanced study and professional roles in computing.

Mr. Ansh Patel consistently demonstrated a strong grasp of the fundamentals of computer systems in my Computer Organization course, covering register transfer and micro-operations, CPU design, pipelining and vector processing, computer arithmetic, memory organization, and input-output organization. He secured an AB grade in this subject, reflecting a solid, above-average command of core architectural concepts such as instruction cycles, addressing modes, pipeline hazards, and memory hierarchy. He engaged with these topics not merely to score well in exams, but to genuinely understand how hardware and software interact, often asking questions beyond the prescribed syllabus.

What stood out to me most about Mr. Ansh Patel was his eagerness to learn and his discipline in following through on that curiosity. He is sincere, consistent, and receptive to feedback, and has since built practical, self-taught experience in systems-level and graphics-related programming on his own initiative, outside the university curriculum. In his third year, he also co-authored a research paper on stock price prediction using machine learning alongside classmates, published in the IJSREM (DOI: 10.55041/IJSREM18090), reflecting a genuine interest in research and an ability to collaborate on structured, investigative work beyond the classroom.

Beyond academics, Mr. Ansh Patel is dependable and collaborative. He worked well with peers during lab sessions and group assignments, communicated clearly, and showed the maturity to work through difficult problems independently before seeking guidance. These qualities, combined with his foundation in computer organization, suggest he will adapt well to both the rigor of a Master's program and the practical demands of a working-student or internship position in industry.

I recommend **Mr. Ansh Patel** without reservation, both for admission to a Master's program in a computing discipline, and for consideration as a working-student or intern in a Computer Graphics or Engine Programmer role. I am confident in his discipline, eagerness to learn, and work ethic, and I am happy to answer any further questions regarding his academic record.

Sincerely,

for *Kalyani* 11/7/26

Ms. Kalyani Adawadkar

Head of the Department, Information Technology

Sigma Institute of Engineering (Affiliated to Gujarat Technological University)
